

Summary

Dedicated frontend engineer with over four years of hands-on experience crafting React-based enterprise applications and ensuring seamless continuous deployment in cloud environments. As a collaborative team player, I thrive in agile settings, delivering high-quality and scalable solutions that drive business impact.

Skills

Frontend:	React · Next.js · TypeScript · JavaScript · WebGL/Three.js
Backend:	Node.js · C# (.NET) · REST · GraphQL · RabbitMQ
Databases & BI Analytics:	PostgreSQL · MongoDB · Matomo event tracking & dashboards
DevOps & Cloud:	Docker · Kubernetes · SonarQube · GitLab CI/CD · AWS (EC2, S3)
Agile & Methodologies:	Agile · Kanban · Jira · Confluence · TDD (Jest, RTL, Cypress)
Tools & Collaboration:	Git · Linux · Postman · Vite · Webpack · NginX
Languages:	English · German B1 (actively pursuing B2 certification)

Professional Experience

Dassault Systèmes - Frontend Engineer Munich, Germany | Nov 2022 – Present

Contributing to multiple concurrent projects within a cross-functional team spanning India and Germany in an Agile environment, delivering enterprise-grade frontend solutions for both internal products and external client engagements.

- Architected and developed a ground-up configuration frontend for a major client project, implementing authentication systems, reactive user experiences, and state-of-the-art architecture patterns
- Enhanced multi-user product frontend for agency-oriented rendering administration, addressing security constraints, performance optimizations, and architectural refactoring to support current and future requirements
- Integrated comprehensive user interaction analytics to drive data-informed UI/UX optimization decisions and improve overall user engagement
- Collaborated closely with QA engineers to establish robust end-to-end test automation frameworks from the end-user perspective
- Modernized legacy demonstration interfaces to contemporary coding standards, significantly improving maintainability and development velocity
- Implemented continuous deployment pipelines on AWS EC2 instances for streamlined testing and demonstration workflows
- Contributed to application user guide enhancements, focusing on usability improvements, security best practices, and brand consistency
- Ensured high-quality project deliveries through close cooperation with operations teams and adherence to enterprise standards
- Led migration from Create React App to Vite, reducing CI build times by 58%, eliminating memory errors, and optimizing asset compression; initiated comprehensive unit and component testing using Vitest to accelerate development feedback loops and improve code quality

SUMM AI - Frontend Developer Munich, Germany | Sep 2022 – Nov 2022

- Redesigned the frontend application with a strong focus on user experience in close collaboration with UI/UX designers, while establishing robust ESLint and Prettier configurations to ensure code quality and consistent styling standards

Gport - Frontend Developer

Tehran, Iran | Jan 2020 – Feb 2022

- Developed a comprehensive new frontend with integrated RESTful endpoints and enforced over 90% test coverage to ensure reliability, while enhancing developer productivity through detailed component documentation
- Applied mobile-first strategy to develop responsive control-panel components, leveraging contemporary layout techniques to deliver consistently optimized user experiences across all screen sizes

Kanoon Farhangi Amoozesh Ghalamchi - Advanced Programming Tutor

Tehran, Iran | Feb 2019 – Jun 2020

- Conducted weekly lab sessions to reinforce classroom learning through practical implementation exercises
- Designed and implemented instructional activities that facilitated meaningful learning experiences for students
- Demonstrated comprehensive content knowledge and maintained ongoing professional interest in programming education
- *Technologies:* Java · JavaFX · IntelliJ IDEA · C Programming · Pointers · Data Structures · Algorithms

Education

M.Sc. in Computer Science

Mar 2023 – Jun 2025

Deggendorf Institute of Technology

- *Master's Thesis:* Led comprehensive benchmark analysis of C# image processing libraries for Dassault Systèmes' 3DEXCITE DELTAGEN platform, resulting in the selection of an optimized library combination that delivered 400% performance improvement, 50% reduction in memory usage, and €5K annual savings in licensing costs
- *Relevant Coursework:* Software Engineering · Cloud Computing · Data Analytics · Architecture and Systems Engineering

B.Sc. in Electrical Engineering

Mar 2016 – Mar 2019

Semnan University

- *Bachelor's Thesis:* Developed an interactive 3D visualization application using RAD Studio's FireMonkey framework and Delphi with OpenGL integration, implementing touch-based user interactions for holographic object manipulation on tablet devices
- *Source:* github.com/sepehrfazeli/Hologram_creator
